

ALLOGRAFT-PROSTHESIS COMPOSITES FOR RECONSTRUCTION AFTER ^cBONE TUMOR RESECTION A CASE REPORT AND LITERATURE REVIEW

Le Van Tho, MD, PhD
Ngo Viet Nhuan, MD

2018

Case presentation

- 60 years old woman
- Chief complaint: Left hip pain
- History of present illness
 - The patient had suffered from left hip pain 6 months ago, which had not improved with medications
 - On the day before hospitalization, she fell → increasing pain
- Physical examination
 - Pain and swelling around the left hip
 - Shortening of the left leg

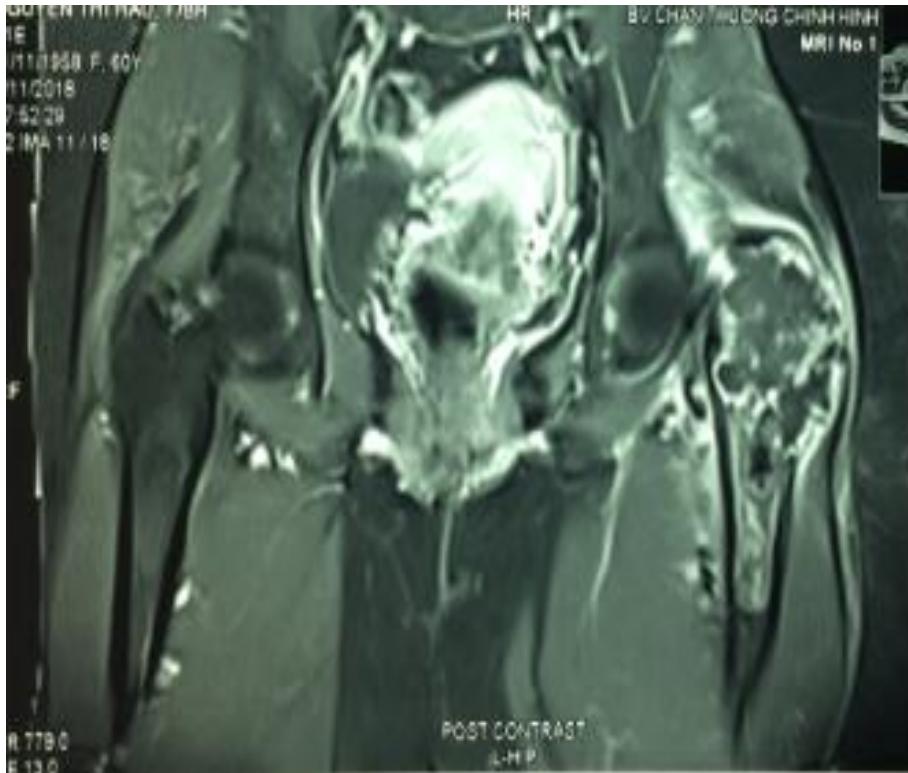

Imaging

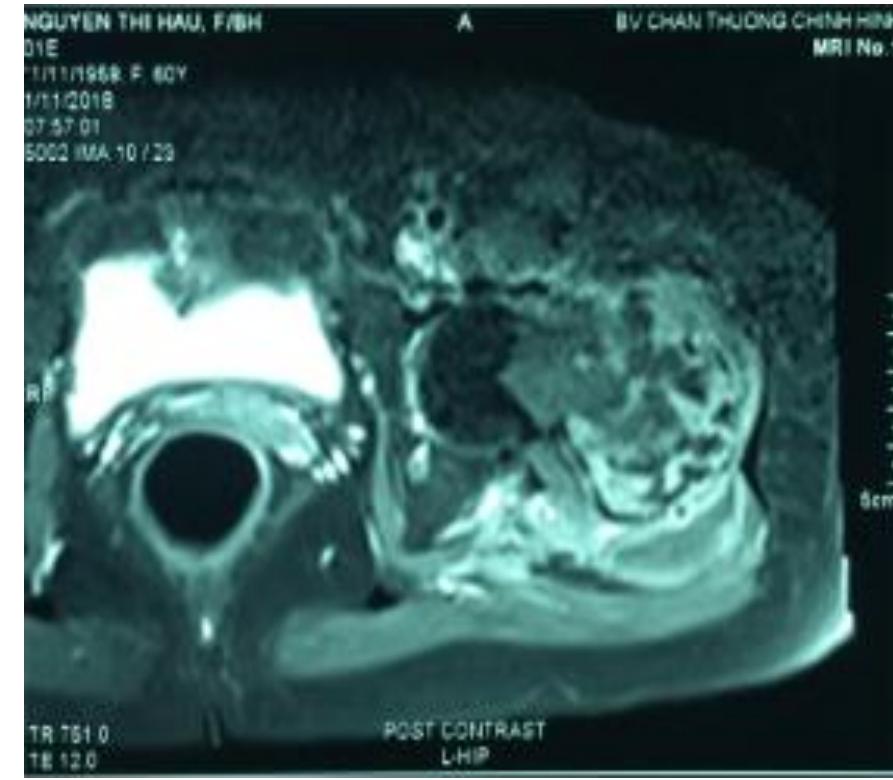

CTscan

Imaging

HOSPITAL FOR TRAUMATOLOGY AND ORTHOPAEDICS
Chia sẻ nỗi đau - Tận tâm phục vụ

Diagnosis

Pathological fracture of Left femoral neck - Chondrosarcoma

Treatment

Wide resection and reconstruction with Allograft – Prosthesis Composites (APC)

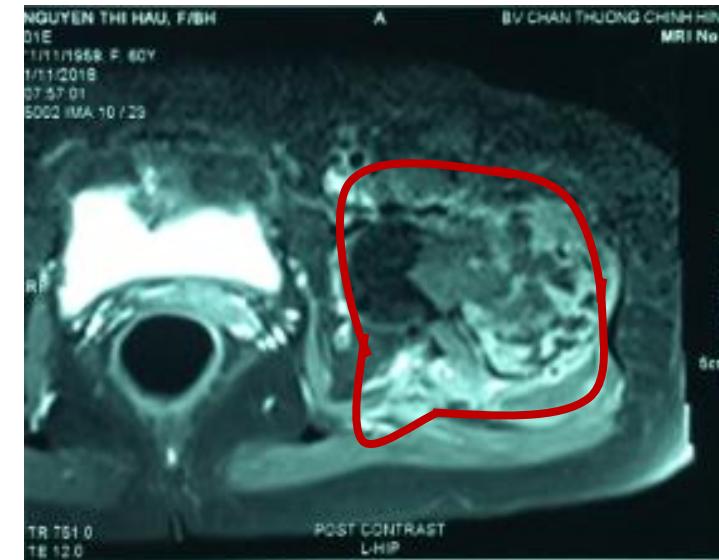

Preoperative planning

1. Tumor resection
2. Allograft – Prosthesis Composites reconstruction
3. Soft tissue reconstruction

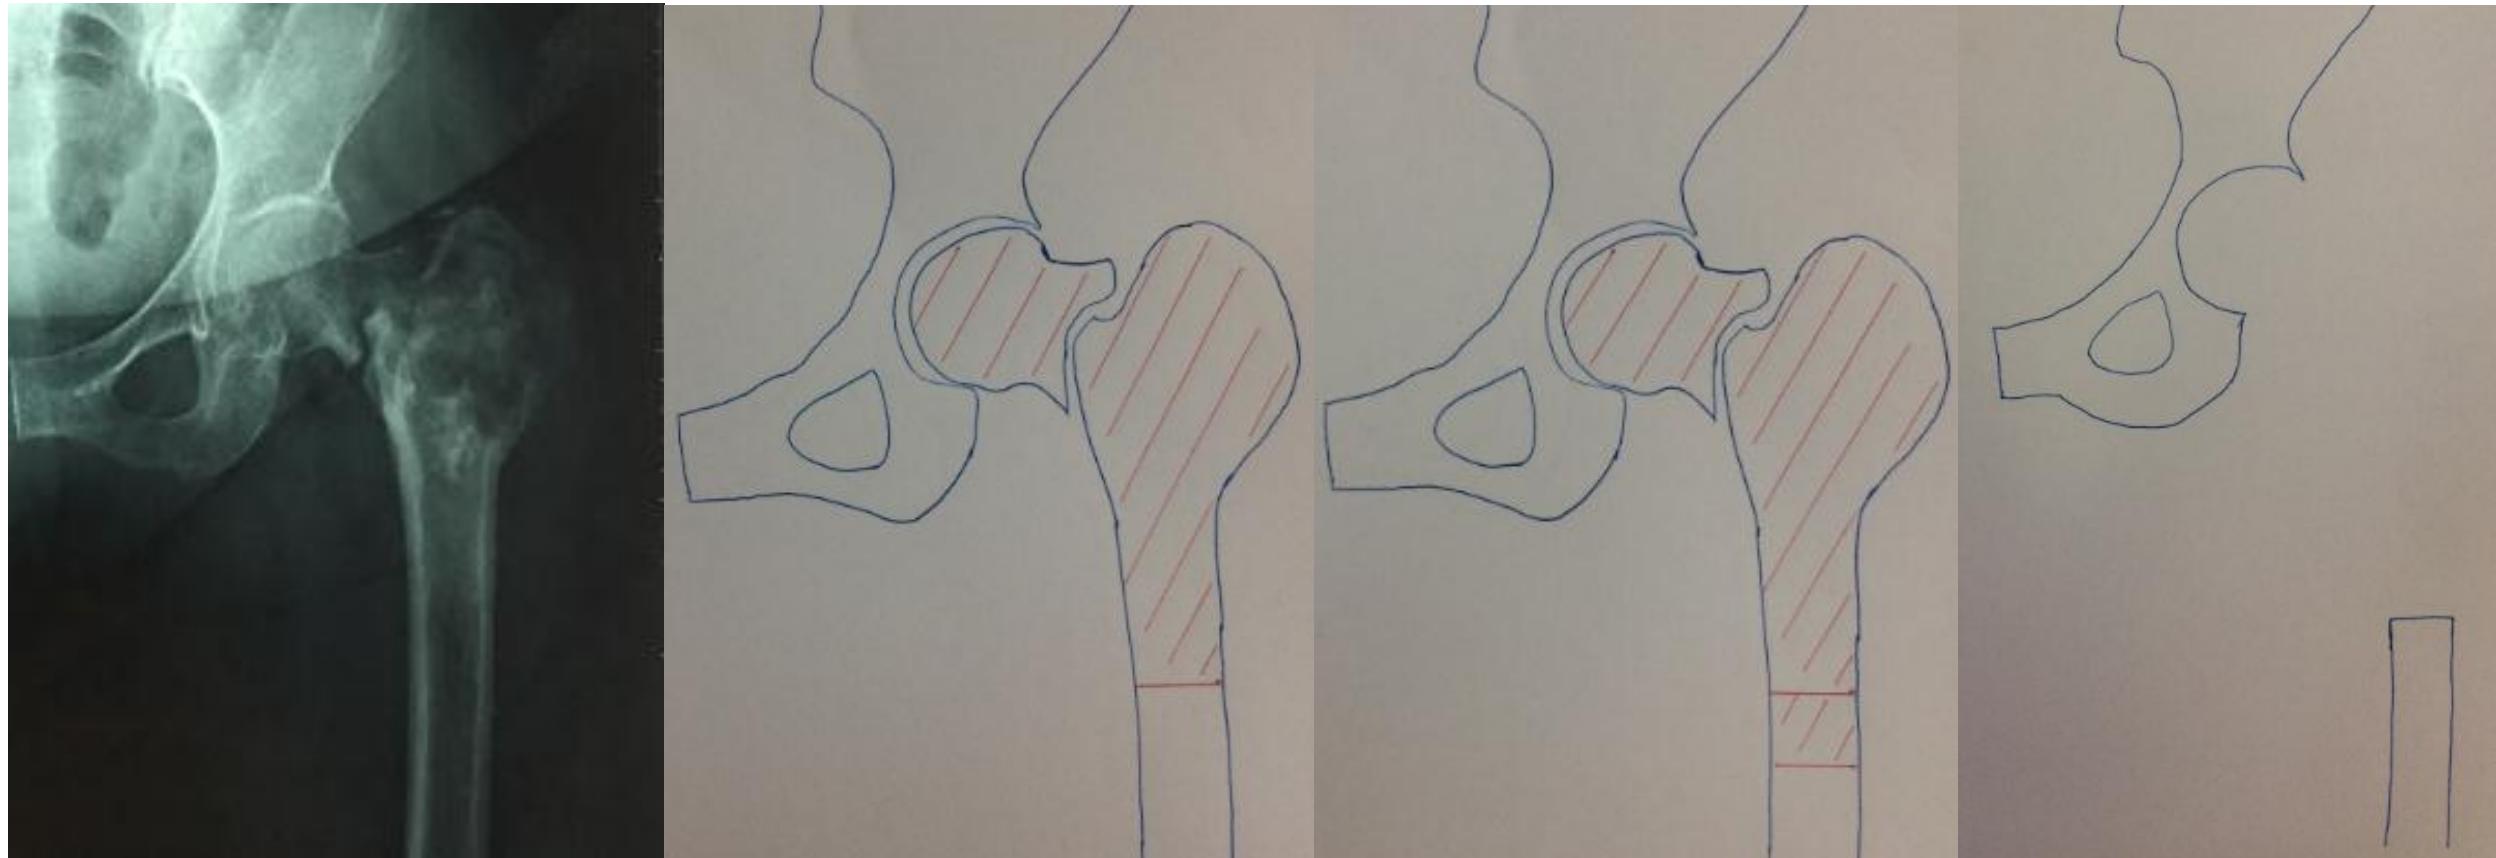

Preoperative planning - Tumor resection

1. Gluteus Maximus and Medius Detachment
2. Vastus Lateralis Reflection
3. Detachment of Posterior Hip Musculature and Capsule
4. Distal Femur Osteotomy
5. Dislocation of the Femur
6. Release of Medial Structure

Preoperative planning – APC reconstruction

Preoperative planning – APC reconstruction

Chia sẻ nỗi đau - Tận tâm phục vụ

Preoperative planning – Soft Tissue reconstruction

1. Reconstruction of the Hip Capsule
2. Reconstruction of the Abductor Mechanism and Iliopsoas
 - Gluteus medius
 - Vastus laterallis
 - Iliopsoas

Discussion – Stability

- Femoral Osteotomy
- Cementing
- Reaming
- Stem length

A: Transverse. B: Intussusception. C: Step cut. D: Oblique ¹

2. Min, L., Peng, J., Duan, H., Zhang, W., Zhou, Y., & Tu, C. (2014). Uncemented allograft–prosthetic composite reconstruction of the proximal femur. *Indian journal of orthopaedics*, 48(3), 289.

Discussion – Stability

- Femoral Osteotomy
- Cementing
- Reaming
- Stem length

A: Cemented
B: Partially cemented
C: Cementless

1. Sim, F. H., Choong, P. F., & Weber, K. L. (2011). *Master Techniques in Orthopaedic Surgery: Orthopaedic Oncology and Complex Reconstruction*. Lippincott Williams & Wilkins.
2. Min, L., Peng, J., Duan, H., Zhang, W., Zhou, Y., & Tu, C. (2014). Uncemented allograft–prosthetic composite reconstruction of the proximal femur. *Indian journal of orthopaedics*, 48(3), 289.

Discussion – Stability

- Femoral Osteotomy
- Cementing
- Reaming
- Stem length

Symposium - Osteosarcoma

Uncemented allograft–prosthetic composite reconstruction of the proximal femur

Li Min, Jing Peng, Hong Duan, Wenli Zhang, Yong Zhou, Chongqi Tu

1. The diameter of reaming can be a little smaller than that of the prosthetic stem
2. The host bone should be reamed 2 cm shorter than the length of the distal prosthetic stem ²

1. Sim, F. H., Choong, P. F., & Weber, K. L. (2011). *Master Techniques in Orthopaedic Surgery: Orthopaedic Oncology and Complex Reconstruction*. Lippincott Williams & Wilkins.
2. Min, L., Peng, J., Duan, H., Zhang, W., Zhou, Y., & Tu, C. (2014). Uncemented allograft–prosthetic composite reconstruction of the proximal femur. *Indian journal of orthopaedics*, 48(3), 289.

Discussion – Stability

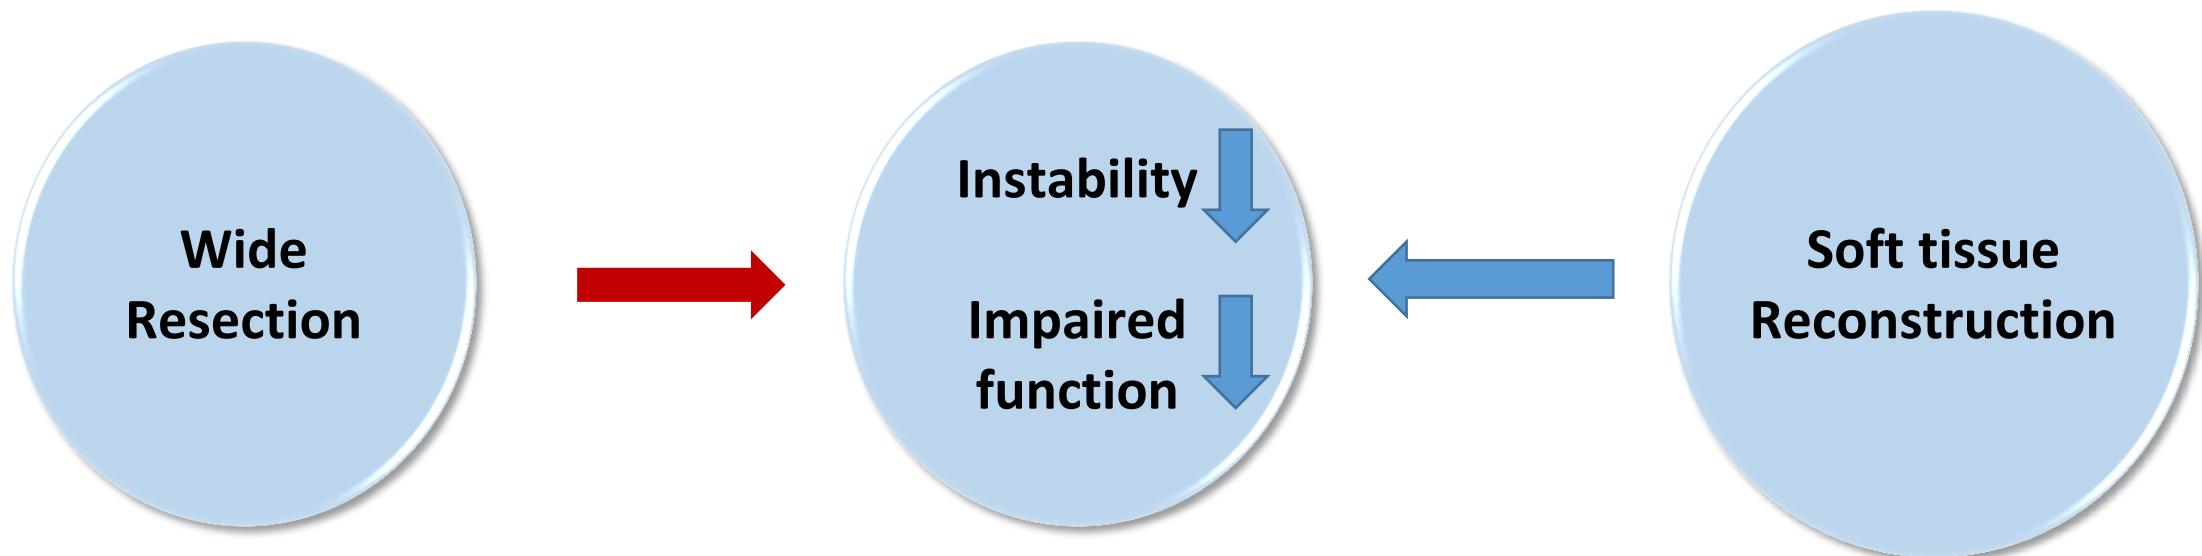

- Femoral Osteotomy
- Cementing
- Reaming
- Stem length

Press fit is considered to be safe when there is at least 6 cm of prosthesis-shaft contact bypassing the allograft host junction ¹

1. Sim, F. H., Choong, P. F., & Weber, K. L. (2011). *Master Techniques in Orthopaedic Surgery: Orthopaedic Oncology and Complex Reconstruction*. Lippincott Williams & Wilkins.

Discussion – Megaprostheses VS APC

Discussion – Megaprostheses

| | No of patients | Average FU | Complications |
|---------------------|----------------|------------|-----------------------------------|
| Ilyas ¹ | 15 | 78 ms | 2 infections, 3 dislocations |
| Ueda ² | 25 | 163 ms | 8 infections, 4 dislocations |
| Donati ³ | 25 | 12 ys | 1 infections, 17 stress shielding |

Dislocation

Stress shielding

Discussion – Megaprostheses VS APC

| | Megaprostheses | APC |
|---------------|---|-----------------------|
| Advantages | Easy to reconstruct Immediate weight bearing | Restore bone stock |
| Disadvantages | Dislocation Revision difficulty | Loosening Nonunion |

Conclusion

- A stable allograft-host junction is essential
- Soft tissue reconstruction is important for good functional outcome
- Allograft Prosthesis Composites (APC) should be a limb salvage procedure of choice in cases with good life expectancy
